Right interior side shown & illustrated throughout instructions. Instructions are the same for Left side installation just mirror.

IMPORTANT NOTES:

DOUBLE CHECK KIT CONTENT

Be sure to first check contents of kit to be sure you have everything per content list. Should you have any questions or concerns with installation, please feel free to reach out to us for assistance at

Info@handleman.net

TROUBLE SHOOTING TIPS

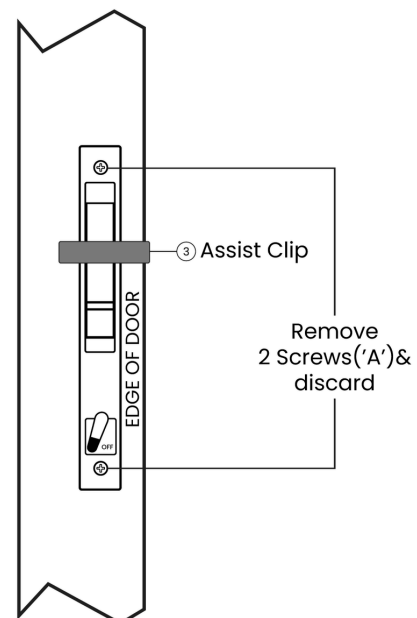

Concern-Assembly Screws won't begin to tighten.

Remedy – Move the inside or the outside halves up or down to better align for screws to start.

For ALL other Concerns reach out to us at info@handleman.net

STEP 1 (Disassembly)

Snap the **Assist Clip 3** in place over the edge of the door and over the lock area as shown in Diagram 1. Remove the 2 existing screws (**ref. "A" on Diagram 1**) from the inside on the door lock unit. These 2 screws will not be used for reassembly, please discard. The inside and outside portion of the lock will remain in the door and held in place by the **Assist Clip 3**, and Clip is to remain during the handle installation process

Diagram 1

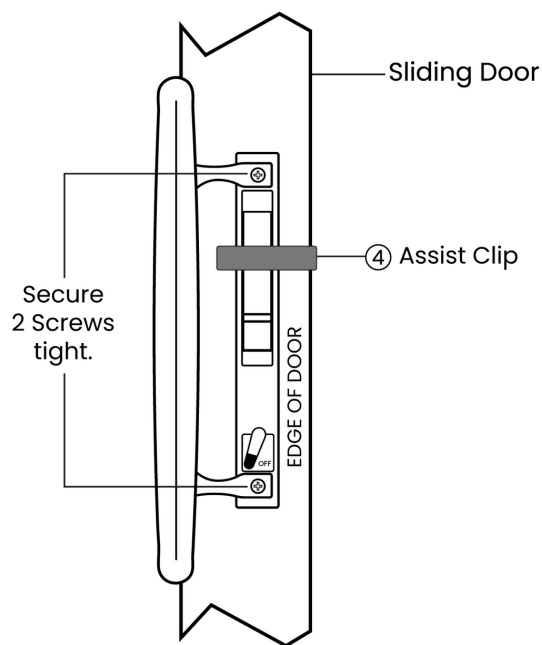

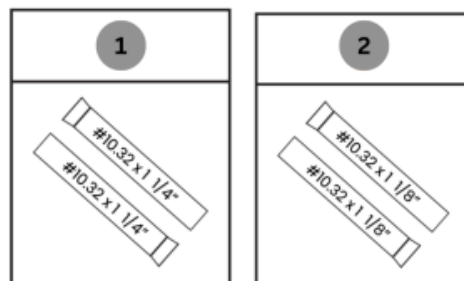

STEP 2 (Final Assembly)

With the **Assist Clip 3** holding the inside and outside half of existing lock assembly in place, apply interior Handle **4**. (ref. **Diagram 2 for positioning**), and begin applying mounting screws. Note, various screw lengths are provided due to variations in door thicknesses.

ITS VERY IMPORTANT TO FOLLOW THESE INSTRUCTIONS!

Start with the longest length (1-1/4") # **2** screws and tighten to secure assembly. Note, if screw tightens but assembly appears to still feel loose replace the #1 screws with the shorter length (1 1/8") # **2** screws. Tighten both screws tight to secure assembly. **Congratulation your new handle assembly is completed. Remove & Discard Assist Clip and enjoy your new handles!**

ITS VERY IMPORTANT TO FOLLOW SCREW SELECTION CLOSELY WHEN REASSEMBLING!
